-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Objections

1. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 1 and 2 been renumbered 5 and 6. Original claims 1-4 have not been formally cancelled. Since they were intended to be replaced with new claims 1 and 2 (renumbered claims 5 and 6) original claims 1-4 will not be considered on the merits. Claims 1-4 should be formally canceled and the complete listing of claims presented would indicate that claims 1-4 have been cancelled. For example:

Claim 1 (cancelled)

Claim 2 (cancelled)

and so forth.

Claim Rejections - 35 USC § 112

2. Claims 5 and 6 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to

Art Unit: 2859

present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Middlestadt in view of Ercole et al.

The device as claimed as far as can be determined is substantially disclosed by Middlestadt with a horizontal threaded rod 70 to adjust the position of the probe 40, and rotating the probe about pivot 50 to infinitely adjust the probe, but lacks a vertical threaded rod to adjust the vertical position of the probe and making the adjustments of the threaded rods being controlled by a servo motors. Ercole et al teaches making a locating fixture vertically adjustable to locate the probe at any desired location. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a vertical threaded rod in Middlestadt to make the probe vertically adjustable as taught by Ercole et al to locate the probe at any desire location. Servo motors are old and well known means to control the movement of a threaded rod in a stepwise fashion. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to add servo motors to the combination of Middlestadt and Ercole et al to electronically control the movement to the probe.

Conclusion

5. An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

A listing of registered patent attorneys and agents is available on the USPTO Internet web site <http://www.uspto.gov> in the Site Index under "Attorney and Agent Roster." Applicants may also obtain a list of registered patent attorneys and agents located in their area by writing to the Mail Stop OED, Director of the U. S. Patent and Trademark Office, PO Box 1450, Alexandria, VA 22313-1450
